

The St. Francis Breast Health Center offers the best support since underwire! We bring the latest screening and diagnostic technology together in one place to offer convenient care and rapid results. Our Genetic Risk Consultant, Breast Health Navigator and Tumor Board offer world-class, comprehensive breast care... right here in the Upstate.

Digital mammography provides high-definition images that can be magnified and adjusted to get the best possible view, adding confidence to the interpretation. And because the images are available in just 10 seconds, patients can enjoy faster exams.

Tell your doctor that you prefer St. Francis for your mammogram, and call **864-255-1396** to make your next appointment.

Our Breast Health Center is fully equipped with **diagnostic technologies**, like a breast MRI and Ultrasound machines, to study any areas of concern found during a mammogram, as well as equipment for physicians to perform diagnostic procedures such as needle and stereotactic breast biopsies.

At St. Francis, a **Multidisciplinary Team** of surgeons, medical oncologists, radiation oncologists, radiologists, pathologists, our Breast Health Navigator and Genetic Counselor, and nurses who meet weekly to discuss patients whose tests come back with a positive result for cancer. They review each case as a team, agreeing upon the best course of treatment prior to surgery. In effect, our patients receive a first, second and third opinion all at the same time ... *for free.*

Our **Breast Health Navigator** is available at no cost to patients who have mammogram results that indicate cancer, as well as those whose results are abnormal but non-cancerous. She offers emotional support to ensure our patients know all of their options and understand exactly what to expect during their testing and treatment.

We offer a **Lymphedema Care** program to support women who are managing lymphedema issues associated with breast cancer treatment. Our trained therapists provide monitored exercise programs, wrapping and compression, lymph drainage massage and education for at-home treatment.

Our **Cancer Risk Screening Program** (CRiSP) helps women with a family history of breast cancer determine their risk for developing the disease. St. Francis' CRiSP is the only program of its kind in the Upstate with a **Genetic Consultant** who is also an Advanced Oncology Certified Nurse, bringing vast knowledge and years of experience to the program.
